Text Features AutoCAD and AutoCAD LT support both TrueType and Type 1 fonts. AutoCAD LT supports all TrueType and Type 1 fonts except in certain complex cases. As a result, AutoCAD LT may not support some font types or combinations of fonts that are in AutoCAD. If you try to install a font that is not supported by AutoCAD LT, you may get an error message. In this case, the only solution is to uninstall the font. You cannot install the font on a different computer. Examples of font support issues: - Fonts that use special characters may not appear. - Special fonts may not display properly when TrueType fonts are enabled.

Comparison to other CAD systems Like many computer graphics applications, AutoCAD has only a single user interface, which often leads to confusion for users. Originally developed by first-generation, turn-key CAD engineers, AutoCAD was intended for use by hand drafters with little or no design experience. The strength of the product is its feature set and reliability. In the early 2000s, AutoCAD was no longer able to run under Windows 95 and 98. The programming language is used to create graphical entities or extend the capabilities of AutoCAD. AutoLISP is the native language of AutoCAD. Visual LISP is an AutoLISP module that converts the AutoCAD scripts to VBA-compatible Microsoft Visual Basic scripts. VBA is part of Microsoft Office and runs inside of Windows applications. Both Visual LISP and VBA are included in AutoCAD. AutoCAD is able to import and export most programming languages. The documentation is not always clear on the documentation site for this feature. Some of the most popular and/or standard programming languages are: AutoLISP, Language The native programming language of AutoCAD is the language, which is used to implement AutoCAD functionality. Visual LISP, Language The "translated" or "output" language of AutoCAD is the language, which can be used to implement AutoCAD functionality. If Visual LISP is used as the output language, the result is written in Visual Basic. This translation can be activated/deactivated within the product configuration. Visual Basic, Language The "input" language of AutoCAD is the

language, which can be used to implement AutoCAD functionality. If Visual Basic is used as the input language, the result is written in AutoLISP. This translation can be activated/deactivated within the product configuration. Visual Basic for Applications (VBA), Language This Microsoft Office tool is integrated into Windows and is one of the most used languages for creating Excel macros. Visual Basic for Applications is used to create AutoCAD macros that can be used in AutoCAD. Models in Autodesk 3D can be used for the simulation and animation of computer models or features of computer models. The prison requires that all inmates be able to walk to the unit they wish to occupy. They then drive the inmates to the cell block and hand them off to the officer that escorts them to the cell. During this time the inmate who is to be escorting the other inmate is still in his/her cell. Another officer must remain with that inmate and it takes approximately 20 minutes for that officer to get to the housing unit. These delays result in extended periods of time where inmates are not supervised. The officers that are on duty are supposed to be spending their time on the unit. The inmates are not to be free to roam about the housing units. On a regular basis there are high pressure areas in the housing units. Officers have reported that these pressure areas are caused by an accumulation of unsupervised inmates. These inmates are purposely harassing other inmates. Officers must work to resolve the problem of the high pressure areas. On a regular basis, officers are called to the housing unit to help inmates with some medical problem. They are called out to fix a faucet that is leaking, to fix a door that is stuck or locked and to work on a window that has been broken. Officers that are called out to the units to help the inmates, work on the unit for a few hours. They have to be careful so that they do not have to get back to their regular unit. They must go to the unit where the inmates that are being helped are being housed. At this time there are often only a few officers to escort inmates. They have to deal with the inmates that are there on a regular basis and usually there is not time to do their normal checks on the unit. Officers frequently have to wait outside a housing unit to get back to their regular unit. It is very common for officers to be called out to the unit for about an hour or two. They must then come back to their regular unit to relieve the other officers. They are then required to stay on the unit until the replacement officer

Camera shows your work in context To see your work in context, place your cursor over any drawing element in a viewport or an insert. With AutoCAD's new camera tool, the perspective camera automatically extends its line of sight from the selected drawing element. Rotating objects, such as cross-hairs, light spots, text, and hatch patterns, can be repositioned using a simple rotation tool. All

cross-hair styles are also rotated and positioned. New tools for importing and drawing content The new right-click context menus give you more flexibility to import and create content in AutoCAD. You can: Import content from a text file or Excel workbook. Locate and select content in a document or set of drawings by using the new find command. Crop and resize content.
