Many different objects, such as walls, windows, doors, and doors with glass can be added to a drawing. Drafting A drafting feature allows the creation of precise and accurate construction drawings in two dimensions. Sections, horizontal and vertical lines, angles, as well as a list of items and symbols are among the most common drafting tools. Data input Data input features are the basis of AutoCAD, and this is the most important part of AutoCAD. They allow an operator to import data into a drawing by filling in fields that describe the data. Since 1980, when the AutoCAD product was first introduced, the user-interface (UI) has been improved and the field of interaction (fields, queries, filters) has been extended. The latest version of AutoCAD also contains a modern three-dimensional drafting and editing application. The three-dimensional drafting application contains the following basic features: Create section views. The section view is an essential feature of AutoCAD for displaying sections. Sections are the basic elements of a drawing. They consist of one or more lines, called section lines, that are either horizontal or vertical, and are connected at intersections. In 3D, horizontal and vertical lines are also called XY and YZ lines

Field of the Invention The present invention relates generally to monolithic integrated circuit fabrication and, more particularly, to a method for the protection of metal oxide semiconductor (MOS) transistors during the formation of high-k dielectric insulator spacers. 2. Description of the Related Art High-k (dielectric constant greater than 10) gate dielectrics are essential for high performance semiconductor devices. To maintain high carrier mobility and low device variability, future generations of CMOS devices will be designed with materials having a high dielectric constant (k) of greater than 10, while at the same time operating at lower gate bias voltages (Vg). This results in a thinner gate dielectric and gate spacer. A thinner gate dielectric and gate spacer allows for greater gate to source/drain overlap, resulting in
