Work on the program began at about the same time as the popularity of the Apple II. Williams Electronics was among the first customers of the Apple II, buying its first computer in 1976. In early 1979, Evans CAD was introduced as a low-cost desktop CAD/drafting package. The popularity of the Apple II was great enough that by 1981, Evans CAD was the second-most popular commercial computer application sold in the U.S., after accounting for software sold on diskettes. The first public version of AutoCAD was released in December 1982, less than a year after the introduction of the Apple II and with a powerful running time of about three hours on a 600K Apple II. In 1984, Evans CAD was renamed AutoCAD, after the company that was later renamed Autodesk. In the last quarter of that year, a few weeks before the U.S. presidential election, George H.W. Bush, Bill Gates and Steven Jobs worked together on a series of ads for Evans. The ads featured a fictitious company called "Autodesk," a reference to AutoCAD. The ads were part of a grassroots political campaign, coordinated by Jobs and co-owned by Microsoft, to help the Bush campaign and to support a federal law requiring manufacturers of computer hardware to guarantee software compatibility. Williams Electronics, then a division of the United Brands Company, acquired Evans CAD in 1988, a year after Autodesk Inc. was formed. In 1995, Microsoft acquired the
