AutoCAD is designed to build 2D drafting and design drawings of architectural, mechanical, electrical and plumbing (arch. and mech. en. pl.), as well as site and building (arch. and mech. en. pl. site and building), civil, and structural engineering. AutoCAD also supports the 2D drafting of blueprints, construction drawing sets, and technical drawings. AutoCAD supports 2D vector (path) lines, circles, arcs, splines, and text, as well as 3D surfaces, solids, polylines (linear features), and other 3D objects. It has an extensive library of predefined geometric objects and a wide selection of fonts. It also supports saving and loading file data in a wide variety of standard CAD file formats. AutoCAD supports the following functions: ● Building design software and supporting data ● Architectural design software ● Engineering design software ● Design management and engineering documentation ● Electrical design ● Mechanical design ● Plumbing design It also provides the following features: ● It supports the standard, industry-specific file formats and interfaces for these file formats: DWG (AutoCAD Drawing format), DXF (AutoCAD Drawing format), DWG, DXF, DWF (AutoCAD Drawing format), SVG, DGN (AutoCAD Drawing format), PDF (Adobe Portable Document Format), TIF (Tagged Image File format), TIFF (Tagged Image File format), and SVG (Scalable Vector Graphics). ● It supports the IES (Interact and Engineering Systems) format for SCAD (Structured CAD Applications). ● It supports the following operating system, platform, and/or API (application programming interface): Windows, Linux, OS X, Android, iOS, Windows Mobile, WebOS, Windows CE, Pocket PC, PlayStation Portable, Wii, Playstation, Palm OS, Symbian OS, and Windows Phone. ● AutoCAD has the ability to import and export from and to a wide variety of standard CAD file formats, including DWG, DXF, DWF, DWG, SVG, DGN, and PDF. ● AutoCAD is designed to work with the 2D drawing primitives (paths and text) and the 3D modeling primitives (polylines, solids, surfaces, and solid models) of other applications.

* AutoCAD Architecture * AutoCAD Electrical * AutoCAD HVAC & Plumbing * AutoCAD Printer Production * AutoCAD Civil 3D AutoCAD Electrical was discontinued in 2014. AutoCAD Architecture was re-released and discontinued on November 5, 2016. BIM support AutoCAD Architecture supports the Building Information Model (BIM) standard. It supports the following BIM View Types: 3D Model: The BIM View Type for AutoCAD Architecture models objects and their relationships in a 3D model. These views appear in the 3D section of the Model Browser. 3D Render: The BIM View Type for AutoCAD Architecture models objects and their relationships in a 3D render. These views appear in the Renders section of the Model Browser. 2D Drawing: The BIM View Type for AutoCAD Architecture models a drawing. This view shows only the drawings in the drawing set associated with the current drawing set. Drawing List: The BIM View Type for AutoCAD Architecture models all drawings and drawings groups in a drawing set. This view shows all drawings in a drawing set. Draft: The BIM View Type for AutoCAD Architecture shows a blank drawing. AutoCAD Architecture uses a new default environment called "AutoCAD Architecture BIM". This is a completely BIM environment for AutoCAD Architecture. It makes BIM environment management easier. See also List of vector graphics editors References Further reading External links AutoCAD

Keygen (Start / Run, type "Somthingkey.exe" and press Enter) Paste keygen file (should appear in your Autocad folder) (you can delete keygen if you want to later) Remember to run Keygen several times, after every change of your current key. For information on how to generate new key at any level you can read Help file (it is usually hidden in your Autocad folder) A new type of wireless communication technology that could enable the creation of wireless "super-Wi-Fi" capable of sending and receiving data at a speed of up to 10 gigabits per second (Gbps) is being developed by researchers at the University of Adelaide. Led by Professor Adrian Perrig, a world-leading expert in networks and high-speed wireless communication technologies, the research team was able to demonstrate a prototype system that could achieve the high speeds currently only available in fibre optic connections. advertisement The technology, described in an article published in the Institute of Electrical and Electronics Engineers' (IEEE) Transactions on Communications, uses a novel form of energy-efficient communication known as quantum energy transfer. Professor Perrig said the technology could be used to provide wireless connectivity in rural areas where there were currently no communications infrastructure. "The technology could be used to enable communication services for use in homes and businesses, for example, and in remote locations such as the bush, where the lack of telecommunications infrastructure makes it difficult to provide Wi-Fi services," Professor Perrig said. "The technology also has the potential to be used as a lower-cost alternative to the existing 4G and 3G networks, with a significantly higher throughput than either of those networks, which use very different technology." Professor Perrig said it could also be used for monitoring conditions such as temperature and humidity, which could help maintain the health and integrity of agriculture and livestock farms. advertisement "The technology has the potential to become a new form of internet that can be used for all kinds of applications, including long-haul communications as well as data-intensive local communication applications," Professor Perrig said. The research team has been working on the technology for more than six years, and has already been able to demonstrate a proof-of-concept that is capable of achieving speeds of up to 1.3 Gbps.
