Personal and networked editing In AutoCAD 2010 a new "Remote Edit" feature was introduced. With this feature, some 3D applications can integrate with Autodesk On-Line applications such as AutoCAD and the 3D visualization applications to allow the remote editing of a drawing. The new feature enables users to directly load files from a remote location in Autodesk Exchange Apps, to work on a 3D model, and subsequently save the file in the remote location. AutoCAD has a number of add-ons and plugins available. In 2013, the (OpenGL-based) Direct Modeling Server (DMS) was discontinued as a client-server product and released as a web service. The DMS is also free for use with AutoCAD 2010, AutoCAD LT, or AutoCAD R20. The DMS was used as the server for the On-Screen keyboard. In October 2013, Autodesk released Autodesk 360, a subscription-based cloud-based service, as part of AutoCAD. Autodesk 360 provides AutoCAD as a service for online editing, 3D visualization, and collaboration. It is free for AutoCAD and AutoCAD LT users and available in public beta mode. The Material Editor and the DesignCenter application were discontinued in 2018. It was removed in version 2016. Release history Support AutoCAD, AutoCAD LT, and AutoCAD R20 have been officially supported and maintained by Autodesk since version R4 (release date April 1996), with Autodesk also maintaining the Software Download website for the software. Autodesk released AutoCAD 2014 and AutoCAD LT 2014 in September 2014, and Autodesk announced AutoCAD LT 2015 in June 2014. AutoCAD LT 2014 and AutoCAD 2014 are both version 2.12. AutoCAD LT 2015 is version 2.14. AutoCAD 2017 was the first version of AutoCAD to be supported and maintained by Autodesk for 20 years. Autodesk will continue to support AutoCAD and AutoCAD LT for another 10 years. In the first quarter of 2019, Autodesk announced that they will discontinue AutoCAD 2016 and AutoCAD LT 2016; no upgrade paths are available. I have an array of objects of different types. When one of the objects inside the array is clicked, I want to send an object from the array that I clicked to a function. the object looks like this: { "_id" : "00039f9323e7b54cee16", "name" : "Hurtado", "text" : "", "createdAt" : "2016-10-29T00:52:25.434Z", "updatedAt" : "2016-10-29T00:52:25.434Z" } In my page I have a function that looks like this: let c = () => { let first = \$(".list-group").find('.list-group-item'); let last = \$(".list-group").find('li:last-child'); let data = { first: first, last: last }; } This is how I call it: let c = () => { let first = \$(".list-group").find('.list-group-item'); let last = \$(".list-group").find('li:last-child'); let data = { first: first, last: last }; } let d = () => { c(); alert("Hello"); } However, when I click on any of the elements inside the list, no alert is shown. It would be a great help to get the last item of the list when clicked, and then get the object from the array for the selected object. A: You can pass a parameter to your method c().

What's New in the AutoCAD?

Easily customize AutoCAD objects. From custom fill colors to palettes to custom annotations, you can now choose how you want your drawings to look and behave by dragging the ribbon down to your preference. Save time when performing repetitive tasks. The new search and replace tool is quicker, more flexible, and gives you more options. It's also easier to use, too. Move your cursor over a drawing element to see a tooltip that explains the element's purpose. Reduce mouse clicks. The Edit Drawing tool now enables you to edit drawing elements quickly and easily, and without the need to hover over all objects in the drawing. Your work flows faster when you can easily perform multiple operations. The new Task-based Interface means you can make changes across the entire drawing with just a single click. Edit multipart objects faster and easier. You can edit multipart objects such as tables and lists as a single group of objects. Change the selected line weight without changing the line color. Now you can adjust line thickness without changing the line color. Edit drawing parts in a more flexible way. The new editing tools make it easier to change the order of parts in a drawing, combine parts into one part, break apart parts, and combine existing drawing parts into a new part. Select entire drawing elements at once. With a single drag-and-drop operation, you can select an entire drawing element without having to select each object individually. New cursor enhancements. The mouse cursor is now more accurately positioned and more easy to control. AutoCAD extension toolbar enhancements. The AutoCAD extension toolbar now supports selection of 3D objects and adds an Easel selection tool to the toolbar. Raster to vector enhancements. When a vector object is merged with a raster image, its outlines are preserved. You can continue to edit the image separately, and the editing tools remain available. Annotations: Position and size annotations. You can now zoom in on the annotations to edit their size and position. Annotation highlighting. You can now color-code annotations to highlight areas of the drawing in a specific color. Annotation distance. You can now adjust the distance between the annotation and the drawing part it highlights. You can now edit,

copy, and paste annotations without converting them to layer objects.
