Singh has been accused by physics professor Dr. Ian Jarvie, who wrote a critical review of the book, of falsifying data and manipulating data. Jarvie explained in his review, published on a physics discussion board on the University of New South Wales website, that he was unable to replicate the calculations of the book. Jarvie also accused Singh of plagiarism. In his rebuttal, Singh claims that he has never intentionally falsified data or manipulated his data, but he admits to a couple of mistakes. Singh also dismisses the accusation of plagiarism. 1. I have never deliberately falsified data, nor manipulated data. 2. I have made a couple of small mistakes in the endnotes, mistakes which have been spotted by two experts in my field. But these were a mistake of a sub-optimal choice of software, and not a piece of data manipulation. 3. I have always acknowledged my mistakes and contacted the original authors, since, as an academic, I take it extremely seriously that this publication was almost entirely my work. It is the biggest error of judgement I have made in my academic life. 4. A few months after publication, I learned that the author of the book in question had contacted me about some of my calculations, but that I had always informed him that my calculations were correct. 5. I really appreciate the way in which you have taken the time to write a rebuttal to my response. I think this is a very fair approach, and I also find the language in which you have written to be very well balanced and professional. So thank you for your courtesy, and for your detailed responses. The main problem, as Singh points out, is that the professor has a1d647c40b
