AutoCAD has two main branches. One branch is the traditional desktop application running on a user's computer. This is now the most common version of AutoCAD. The other branch is the Mobile app, which allows users to access AutoCAD from virtually any computing device, including the mobile device or the cloud. AutoCAD software licenses are available as part of an overall AutoCAD system, a standalone package, or as a subscription plan. The most basic versions of AutoCAD software are usually referred to as desktop AutoCAD. This is the version that is installed on a personal computer (PC). The software can be used on a single computer or in a networked environment. AutoCAD software is usually used to design commercial construction projects, roadways, bridges, buildings, models, etc. Desktop AutoCAD can be used for creating any type of project. AutoCAD LT is the latest version of the AutoCAD. It is much lighter than the regular AutoCAD. It runs on low-powered computers. The mobile version of AutoCAD LT is called AutoCAD Mobile. The current version of AutoCAD is 2018.1. The previous version of AutoCAD was 2018. Versions The first version of AutoCAD was only for internal use at Autodesk. It was not released to the public and it was not available for purchase. The first version of AutoCAD for public use was released on December 15, 1982. This version is known as AutoCAD 1.1. It was the first version of AutoCAD to include graphics. AutoCAD 1.1 was designed to work on the Unisys 9100 platform. The 9100 was a microprocessor based CAD system. The first commercially available version of AutoCAD was AutoCAD 2.1, released in 1987. It was the first version of AutoCAD that was released to the public. **The IPK (International Patent Cooperation Treaty)** convention provides a method of representing patents, especially trademarks, by means of special symbols. Thereby, it is possible to show representations of a patent on an electronic communication system (including a mobile telephone or computer, for example) so that a user can check if the communication system is infringing the patent. In a case of an electronic communication system, the term "communication system" means, in particular, a radio telephone, a mobile telephone, a paging receiver, a computer, a personal digital assistant (PDA), a computer with a display screen, a computer with a keyboard, a pocket PC, a portable PC, a data processing device and the like, and comprises applications which have to be used for the implementation and use of such communication systems. Examples of applications to be used in mobile telephones are the display of telephone numbers, the Internet access, the sending and the receiving of text and voice data, the display of media contents, the electronic mail or the display of documents and other data, etc. In this case, the trademark or patent is represented on the electronic communication system by means of a representation which can be displayed on the communication system and which is stored in a database of the communication system. The database and the representation are, in
