[File not signed] C:\Program Files. C:\Program Files (x86)\Canon\I Network Scanner Selector EX\CNMNSST.exeQ: How to install cuda 6.0 for caffe? I want to use Caffe to train the YOLO v2 on Windows. When I clone Yolo package, I can't find the cuda toolkit because it's only available for cuda 5.5 in Ubuntu. A: Caffe is a python package, so should compile under Python 2.7, in the latest version of the package you can find this line to install CUDA: sudo python setup.py build_ext --inplace to install the toolkit for a new Python 3.X installation would be this: sudo python3.6 setup.py build_ext --inplace

Achieving the desired grid resolution and density allows for fewer. A high degree of accuracy in a static image.. In addition to the automated operator, a fixed operator could.Q: Opening multiple files at once - VB.Net I have a vb.net script that opens a few files in separate directories and then saves each one as a separate txt file in the directory for that file. The issue I'm running into is when I run the script I have the following results: - Name1.txt - Name2.txt - Name3.txt - Name4.txt - Name5.txt What I want to do is create a script that will open 1 file at a time and at the end of each file open it as a txt file so the results would look like: - Name1.txt - Name2.txt - Name3.txt - Name4.txt - Name5.txt I could always manually copy/paste the result from the first script and rename it manually but I was wondering if there was a way that I could have a script open 2 different files simultaneously to a directory and then at the end of the script remove the files/directories it had created? This is what I have so far: '*****' 'Script Name: LocationExample01 'Script Module: c:\Users\Me\Desktop\LocationExample01.vbs 'Author: John Doe 'Description: Script to locate files, open them, and then return them to the Desktop '***** Option Explicit Sub Main() Dim strNewDir As String strNewDir = "C:\
